

The Ondori Mission

Ondori is a Rapid Secure Transaction Resource for a peer-to-peer cryptocurrency network. We are a growing global decentralized digital currency that will allow you to move money with lightning fast transactions with minimal to no fees to be used in our RSTR Market (to come) or for personal and business. Simply send and receive RST from one address to the next anywhere in the world.

The Ondori Vision

Our vision is to be a decentralized peer-to-peer cryptocurrency payment resource with real-world usability that will be used all over the world to buy and sell goods or services within our RSTR Market, peer-to-peer, and in stores or over the internet. It's our vision to help introduce Ondori RSTR and cryptocurrency to the large global population that isn't knowledgeable about cryptocurrency by strategic marketing and the targeting of everyday people doing everyday things in life - work, play, and the everyday lifestyles.

What is Ondori RSTR?

Ondori RSTR is a fun and easy to use decentralized cryptocurrency that is designed to be a fast and secure way to send payments, with optional privacy (zRST). Ondori provides its users with the ability to send funds peer-to-peer in a matter seconds, or instantly (QuickX), from anywhere across the globe with free and easy to use wallets available for your specific operating system. Also available is the Android RSTR mobile wallet (<https://play.google.com/store/apps/details?id=io.rstr.android>).

As the world moves towards the mass adoption of digital assets and cryptocurrencies, Ondori's true aim is to be a coin that is scalable and functional for everyday use. With the recent explosion of thousands of new digital asset projects, Ondori prides itself on being a truly functional and scalable payment platform with a team and development strategy that focuses on producing tangible results without all the hype and false promises that is seen from many other projects in the digital asset space.

Ondori RSTR offers block rewards in the form of Proof of Stake (PoS) and Masternodes (MN). PoS and MN work together to add security to the network. Ondori also plans to offer a Proof of Transaction (PoT) feature in the future. PoT will be similar to how you can receive cash back for using credit cards, and will add an additional layer of security to the network. PoT will offer incentives to users who actively participate and will be an integral part of the coming RSTR Market.

Ondori Future plans and use case

Ondori RSTR plans to offer a RSTR Market (RM) which will be a place where people can come together to buy or sell their goods and services, and where users will be able to buy and pay with RST while earning rewards thru PoT as incentives for their use and activity. The RM will be a peer-to-peer network backed by RSTR blockchain and powered by Proof of Transaction. You will be able to utilize our network to buy and sell goods or services to one another.

In addition to buying and selling, the marketplace will be developed to allow you to buy RST direct, set up e-commerce, merchant accounts, debit cards, chat with other users thru our social platform, and much more.

Our vision is to see Ondori RSTR having real-world use and helping to bring cryptocurrency to those in the work, play and everyday areas of life. We hope to see you be a part of helping us fulfill this vision.

Ondori RSTR Specs

Algorithm	PoS 3.0 Bitcoin Core 0.10.x
